# EXPLORER 323

Ultra-compact comms-on-the-move BGAN terminal

## Compact voice and broadband solution

EXPLORER 323 is an ultra compact BGAN terminal for voice and data communication on-the-move, a perfect match for our Cobham PRISM PTT<sup>®</sup> solution.

The one-piece system consists of a combined transceiver and switched beam antenna with integrated wifi.

Whether you're engaged in humanitarian operations, cargo or rail transportation, telemedicine or emergency services, you need easy deployable communication equipment you can always rely on - regardless of time or place.

## Instant communication

Simply place the terminal on the roof - it is easily mounted with optional magnetic mounts - and connect your phone to the EXPLORER app or log onto the wireless network with your PC to turn the vehicle into a mobile communication hub.

## No moving parts

The beam switching antenna is ultra compact and lightweight (just 3.9 kg / 8.5 lbs), ideal for vehicles or trains on-the-move. It is designed for robust and durable use with no moving parts.

## No roaming

BGAN offers mobile broadband connectivity wherever you go at fixed pricing with no roaming fees. With the EXPLORER 323 you know your cost of communication regardless of the number of borders you cross.

## First of its kind

As a vehicular terminal, EXPLORER 323 is the first terminal to obtain both Inmarsat Class 12 Type Approval and BGAN M2M Certification, enabling it to operate with traditional BGAN and BGAN M2M SIM cards.
